## **DETAILED ACTION**

### ***Continued Examination under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/10/08, has been entered.

### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance: In response to the final office action, dated August 08, 2008, further in view of applicant's amendments filed on 11/10/08, the application has been carefully reviewed and respectfully considered.

According to applicant's remarks based on currently amended subject matter, as discussed in page 8 through 12, claims 5, 9, 13 and 17 have been cancelled.

Applicant's arguments with regard to the remaining claims are believed to be persuasive, and the rejection has been withdrawn. Therefore, claims 1-4, 6-8, 10-12, 14-16 have been allowed, for the reasons given below:

With respect to claims 1-4 and 6-8, the prior art searched and of record neither anticipates nor suggests the claimed invention as amended. In particular, a system comprising: a data management system having a data manager for obtaining variable data from a database; a document production system for composing documents containing the variable data obtained from the database, the document production system including: a document input station configured to generate a soft document in accordance with an input document; a document composition engine being configured to generate a document layout in accordance with the soft document; a document designing station configured to enable proofing and modification of the document layout; a layout processor configured to generate at least one document in accordance with the document layout, the at least one document being populated with the variable data and being formatted for printing; and a printer configured to print the at least one document; and a message bridge for coupling the data management system to the document production system to enable the document production system and data management system communicate data messages that enable the proofing of the document layout at the document designing station and generation of the at least one document populated with the variable data at the layout processor.

Further, regarding to claims 10-12, and 14-16, the prior art searched and of record neither anticipates nor suggests a method for communicating between a

Art Unit: 2625

document production system and a data management system comprising: generating a document layout at a document input station of a document production system, the document layout being generated in accordance with a soft document; receiving the document layout at a document designer station of the document production system, the document designer station being configured to enable the proofing and modification of the document layout; obtaining variable data from a database in a data management system; generating at least one document in accordance with the proofed document layout at a layout processor of the document production system, the at least one document including the variable data; printing the at least one document at a printer of the document production system; and coupling the data management system to the document production system through a message bridge to enable the document production system and data management system to communicate data messages that enable the proofing of the document layout at the document designing station and generation of the at least one document populated with the variable data at the layout processor.

Therefore, claims 1-4, 6-8, 10-12 and 14-16 are Allowed for the reasons the claimed invention are distinct from the prior art searched and of record neither anticipates nor suggests the claimed invention alone or in combination as amended.
